

# Therma-Stor

## Heat Recovery Water Heater Accessories

Part Number:	Item:	
<b>4024195</b>	<p><b>Valve, Water Bleed</b></p> <p>The water bleed valve is used to bleed hot water from a Therma-Stor Heat Reclaim Water Heater during periods of low/no water use and continued refrigeration operation. Designed to prevent water from overheating. Typically controlled by water temperature sensor (aquastat). Electrical specs.</p>	
<b>4016011</b>	<p><b>Anode, Magnesium 56"</b></p> <p>A one-piece solid replacement anode, the same as is installed in new Therma-Stor tanks.</p>	
<b>4016054</b>	<p><b>Anode, Mag. Linked 58"</b></p> <p>The linked anode is used when replacing a solid anode is challenging due to space considerations. The anode is broke into a chain of 12" links to facilitate easy removal and installation.</p>	
<b>4021110</b>	<p><b>Drain Valve Kit (Hose Bib)</b></p> <p>When installed near the water inlet of a Therma-Stor, allows for easy draining of the tank. Includes drain fitting, Tee and di-electric connector.</p>	
<b>4018282</b>	<p><b>Aquastat</b></p> <p>The aquastat provides temperature sensing and setpoints in order to control accessories like a water bleed valve or a three way heat reclaim valve. The bulb extends away from the control on a 30" thing. Compatible with (electrical specs)</p>	
<b>4018286</b>	<p><b>Immersion Well</b></p> <p>The immersion well allows the temperature sensor of the 4018282 aquastat to me immersed into the water tank of any Therma-Stor for more accurate temperature sensing. The well can be installed in place of the mid-port stub, replace an anode in the top of the tank, or be incorporated into the hot water supply piping.</p>	
<b>4021111</b>	<p><b>Aquastat/Strap-on</b></p> <p>The strap-on aquastat provides an easy, unobtrusive way to sense water temperatures. Compatible with (pipe sizes) and (electrical specs)</p>	
<b>4023277</b>	<p><b>Stand</b></p> <p>The stand is designed to raise a Therma-Stor Heat Reclaim Water Heater 6" off the floor. This will satisfy NSF requirements. Designed specifically for Therma-Stor 120 gallon tanks, not recommend for others.</p>
